Web-Based School Academic Information System

(Case Study at an MTs School in Bandung)

Authors: Wahyudin, Heri Wahyudi, Komarudin

Abstract:

Academic management is an essential part of the education process. This study focuses on developing a web-based academic information system for a school in Bandung, aiming to digitize the data collection process that was previously manual. The system is built using PHP and MySQL, enabling more efficient management of student, teacher, and scheduling data.
